

# CO-OP KIDS CLUB IS HERE!

*Building Bright Futures—One Meeting at a Time*

Southeastern Indiana REMC is excited to officially launch Co-op Kids Club—a new monthly program created just for children in grades 1–6!

This fun, hands-on club is designed to help kids learn about safety, community, and how their local electric cooperative works—all while making new friends.

**LOCATION:** REMC Community Room  
**WHEN:** First Thursday of each month  
**TIME:** 6–7 p.m.  
**FIRST MEETING:** March 5

## What to Expect on March 5

Our kickoff meeting is just days after this issue of REMC Connect is published—and we can't wait to get started!

**At our very first Co-op Kids Club gathering, kids will:**

- ▶ Create a fun, hands-on craft to take home
- ▶ Learn an important electrical safety tip in a kid-friendly way
- ▶ Enjoy a simple snack (cookies and juice boxes)
- ▶ Meet other kids from across our seven-county community

The evening will be interactive and engaging, with simple explanations that help children understand what a cooperative is and why safety matters. Whether your child is naturally curious or just loves crafts and snacks with friends, there will be something for everyone.

## Register Today

To keep the experience meaningful and manageable, space is limited and **registration is required**.

Visit [www.seiremc.com/coopkidsclub](http://www.seiremc.com/coopkidsclub) to reserve your child's spot for March—and be part of something new and exciting at your co-op.

Co-op Kids Club is about more than crafts and snacks. It's about building community, teaching safety, and helping the next generation understand how we all work together to power brighter tomorrows.

## Coming in April: Powering Our Homes

At our April meeting, we'll explore *"Powering Our Homes – How Electricity Gets to Your House."*

**Kids will discover:**

- ▶ Where electricity comes from
- ▶ How it travels across power lines
- ▶ What happens before it reaches your home
- ▶ Why lineworkers and safety rules are so important

Through a hands-on activity and simple demonstrations, children will learn how Southeastern Indiana REMC safely delivers power to families every day. It's a great opportunity for kids to better understand something they use constantly—but may not have thought much about before!
