

Stay Powered. Stay Connected. Save More.

RELIABLE POWER. RELIABLE INTERNET. REAL SAVINGS.

When severe weather strikes, power outages can interrupt more than just the lights. Today's homes rely on electricity and internet connectivity for communication, work, safety, and everyday comfort. Southeastern Indiana REMC's Always On – Generator + Gig Bundle helps ensure your home stays powered and connected when it matters most — while also providing meaningful savings.

Members who participate in the Generator Program and sign up for or upgrade to SEI Fiber Gig internet service can have their generator maintenance fee waived, saving up to \$420 per year. It is a simple way to combine two valuable services while reducing annual costs.

This program pairs the reliability of a Generac home standby generator with the speed and performance of SEI Fiber Gig internet service. A home standby generator automatically restores power during an outage, helping keep essential systems operating without interruption. From refrigeration and lighting to heating, cooling, and other important household needs, backup power provides peace of mind when storms or unexpected events impact the electric system.

At the same time, SEI Fiber Gig service delivers the fast speeds and dependable performance needed for modern households. Whether streaming, working remotely, learning online, or managing smart home technology, fiber provides the reliable connectivity today's homes depend on.

By combining backup power with Gig-speed fiber internet, the Always On bundle strengthens your home's resilience while helping you stay connected to the people and resources that matter most. It is a smart way to prepare for storm season while making the most of the services your cooperative provides.
