

Autumn Air, Efficient Care

UPGRADE TO A MINI-SPLIT HEAT PUMP FOR CUSTOMIZED COMFORT THIS FALL

As the seasons change, keeping your home comfortable without wasting energy becomes more important than ever. Mini-split heat pumps offer a simple and efficient solution — giving you the ability to control the temperature in specific rooms or your whole home while keeping energy use in check.

Unlike traditional heating and cooling systems, mini-splits don't require ductwork. This makes them easier to install, more energy-efficient, and perfect for both new construction and older homes. Their flexibility allows you to heat or cool only the spaces you use most, saving you money on monthly bills while still providing year-round comfort.

Another key advantage of mini-split systems is their efficiency. With high SEER2 and HSPF2 ratings, they are designed to deliver powerful heating and cooling with less energy consumption. That means lower utility costs and a smaller environmental footprint — benefits that last season after season.

READY TO START SAVING?

SEI REMC members can receive a rebate of \$500 for whole-home mini-split heat pumps and \$300 for single-room units that meet efficiency requirements. Upgrade today to enjoy customized comfort, lower energy costs, and money back in your pocket.

For families looking to stay cozy this fall and winter, mini-splits are also whisper-quiet and provide consistent comfort without the temperature swings common in other systems. Whether you need a system for your entire home or just a single room, there's a mini-split option that fits your lifestyle and budget.
