

COOL PERKS FOR HOT DAYS

MEMBER *Perks*

As summer heats up, SEI REMC is here to help you stay cool, save money, and enjoy some high-speed perks all while making smart energy choices that benefit everyone on the grid.

Chill with SEI Fiber

Long summer nights are made for streaming. Whether you're catching up on your favorite series or hosting a movie night indoors, SEI Fiber delivers fast, reliable internet without buffering interruptions. With packages built for every household, our members can enjoy crystal-clear streaming and smooth connectivity across all devices, even when demand is high.

Time-of-Day awareness

Did you know shifting your energy use can lead to savings? During peak hours, typically hot weekday afternoons and early evenings, energy demand and costs rise. That's why we recommend running major appliances like washers, dryers and dishwashers during off-peak times (like early mornings or late evenings). These small changes help reduce strain on the system and lower overall costs for everyone.

Get rewarded for smart choices

Our energy-saving programs, like Beat the Peak and our Smart Thermostat programs, offer simple ways to support grid reliability and receive incentives. With our Smart Thermostat program, members can receive a free ecobee3 lite thermostat or register an existing smart thermostat and earn bill credits for participating in brief, seasonal adjustments during high-demand times. Beat the Peak alerts give you the option to voluntarily reduce usage when electricity is most expensive, and participation helps lower overall costs for all members with no commitment.

This summer, let SEI REMC help you make the most of the season. Save money, stay cool and enjoy the perks of being part of a cooperative that puts its members first. Visit seiremc.com to learn more about our energy-saving programs and SEI Fiber packages.
